Claim Objections

1. Claims 14-25 are objected to because of the following informalities:

Regarding independent claim 14, the term "operable" in independent claim 14 makes the limitations following it to be optional, which renders the meads and bounds of the claim to be indefinite. Claims 15-25 depend on claim 14; therefore, claims 15-25 are rejected for the same reason. Appropriate correction is required.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b)

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 7 and 8 of U.S. Patent No. 6,697,359. Although the conflicting claims are not identical, they are not patentably distinct from each other because combined claim 7 and 8 of the Patent application merely broadens the scope of the claim 1 of the present application by eliminating the specific elements and their functions of the claims. The difference between claim 1 of the present Application, and claim 7 of the US Patent 6,697,359 is the limitation "n-port, switch crossbar," and "generic ports." Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to be motivated to specify the specifics of the type of ports along with its specific characteristics to implement in the switch element, as well as, the type of fabric switch to utilize, with the manipulation of claims 7 and 8 of the patent to produce the claimed invention of present claim 1.

It has been held that the omission an element and its function is an obvious expedient if the remaining elements perform the same function as before. *In re Karlson*, 136 USPQ 184 (CCPA); Also note *Ex parte Rainu*, 168 USPQ 375 (Bd.App.1969); omission of a reference element whose function is not needed would be obvious to one skilled in the art.

Allowable Subject Matter

2. Claim 1 is allowed over prior art.
3. Claims 2-13 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2616

4. The following is a statement of reasons for the indication of allowable subject matter: The prior art fail to teach or suggest with respect to claim 1, an IC switch that includes a steering state machine and a switch crossbar to provide an available data channel between each generic port and every other generic port in the IC switch.
